JeeEun Lee is a third-year Ph.D. student in Design and Environmental Analysis (DEA), who wants to build a bridge between Architecture and Psychology. JeeEun has a background in Architecture (BArch) and worked as an engineer and a designer for a construction company in Korea. While working on a construction project and several design-build bidding projects, she realized objective grounds and evidence are crucial to persuade and provide GOOD SPACE to occupants. Studying in Environmental Building Design at Penn (MEBD) was a way to learn how to quantify the quality of space by running computational building simulation relate to thermal and visual comfort of occupants. Another way is studying psychology to understand occupants in depth. Her research focus is the effect of lighting condition in workplace. Besides research, she loves eating GOOD FOOD!
